TORONTO, SATURDAY, OCTOBER 14, 1939.

Quebec Voice Rebukes **Fanatics**

(By JUDITH ROBINSON:) Comforting proof of high I.Q. in P.Q.-once more from Le Jour of Montreal:

This war is not only England's war and France's war-it is our war. It is our war because it involves our feelings, our origin, our alliances; it is our war because of the formidable clack between two principles of social organization, one of which is going to win. Human liberty is more seriously threatened than ever before. It must be defended. It is our life, and we want it to be our life forever. Gangster-ism must not be allowed to tri-umph. Crime, the cult of force, falsehood, collective murder and the horrible insanity of megalomaniacs must come to an end. We have lived for years through continual crises and no economic tranquillity is possible. Society has been overturned and spirits have been led astray. This must Stop. It must! And it is to Canada's everlasting honor that she has entered this modern crusade whose objects are so much more noble, more beautiful and more generous than those motivating the ancient crusaders who made such useless trips to the Holy Land.

In their blind hatred of the English, our little fanatics are ready to sucrifice the whole world to those gods of blood and of carnage which misled peoples have set up. Well, all those of us who understand, who can see . . . choose, not these ignominies, but that Franco-British civilization without which human living must fall back, as in Germany,

into barbarism. There is nothing else so flexible, so perfectible, so human in the world. Don't ask any one who has sampled British civilization, either in the Commonwealth or in the United States, to go elsewhere willingly to live. Only France and a few rare democratic states can possibly offer him a home. He would strangle anywhere else, for elsewhere he will find his human dignity undermined. Liberty within the framework of order, that liberty, for which so many men have died, has worked this miracle, is the very basis of that civiliza-tion without which life cannot be

worth living. Here in the Province of Que-bec we have more than any one else on earth enjoyed British freedom. We have done as we pleased. And if our life some-times seems narrow, harried and restricted, it is not the fault of those putrefying remnants of the Middle Agen which we must sweep out of our streets.

Let our scatter-brains give thought to these matters. It will make them wiser and will allow them to live more decent, less puny lives.

Heart up. Her Majesty Queen
Salote of the Tonga Islands has

The Kingdom of Tonga knows

what this war is about.

The Tonga Islands, the geog-The Tonga Islands, the geographies say, are a small archipelago of the Southwestern Pacific. Their other name is the Friendly Islands. Their population is twenty-five thousand; their form of government a limited monarchy. Their represen-tative institutions trace back like England's, to tribal conclaves. Captain Cook visited them on his way to Australia, but didn't do anything about them. Copra is their chie! export, and their inhabitants are of Polynesian stock and wear garments woven of bark. Missionaries were aeroplane engines—and the death narrow band of radio, are ruled out the first English influence they ray story is revived in the United by two other conditions. One is the knew, and in 1900, after rather more States and Canada, but none of absorption, or blanketing effect of than a century of missionary influence, they became a British protectorate. That's about all the geographies say of the Tonga, or Friendly, Islands.

The message of Queen Salote says the rest. The resources of the Kingdom of Tonga have been placed by the Parliament of Tonga at the disposal of Great Britain, and the Tonga Islanders know why.

Canada may be scatter-brained in spots, but there's nothing wrong with the native Polynesian I.Q.

A tired American citizen has written the New York Times to protest that, thus far, the wordage of the embargo debate in Washington "about equals the wordage of Gone With the Wind,' the nearest appropriate measure for comparison"
One hundred and thirty thousand

words, he notes, were spoken on the subject by United States Senators and Representatives in one week's debate. Two hundred and twenty thousand more words were written into the Congressional Rec ords by the same Senators and Representatives, or those of them that thought of a lot more to say after they stopped talking. Their fellow-countryman and critic objects that the total of 350,000 words expressed only two thoughts, which might have been better expressed in four-teen words each. The same four-teen words. Thus:

Pro-embargo: "We must keep out of war; but, of course, we hope the Allies win." Anti-embargo: "We hope the Allies win; but, of course, we must keep

The commonest example is the on motors.

Washington, Oct. 13 (AP).-Any possibility of the United States intervening in the war with a peace plea, on its own initiative, appeared definitely ruled out tonight, despite the renewed hints from Berlin that the German Government would welcome such action.

When reporters brought up the subject at his press conference today, President Roosevelt observed that he had not yet received any word direct from Berlin as to peace move suggestions that have been made unofficially. He said he had nothing to say about the possibility of peace moves from here.

State Secretary Hull said no phase of the question of mediation had been brought up with the United States Embassy in Berlin by the German Government.

Press despatches from Berlin quoted authorized Nazis as saying any neutral action must come in response to Chancellor Hitler's] ⁸ speech last Friday and not as a result of any diplomatic request by

BRITAIN OFFERS NEAR-LIMITLESS BACON MARKET

Increase in Hog Stock .Urged on Farmers to Meet Expected Demand

QUOTA NOT FILLED

(Farm leaders while preparing for Increased production to meet war needs have their eyes on peacetime post-war markets. In the third article of a series on Canada's war effort, the opportunity for bacon producers is discussed.)

(By R. A. FARQUHARSON.) (Staff Writer, Globe and Mail.) The most effective way an On-

tario farmer can serve his country at the moment is to add to his stock another brood sow.

This is the advice given to The Globe and Mail by farm officials and live-stock men even before definite mental control of the control o inite word has been received from Britain outlining in detail what is

expected from Canada in the way of farm products.

Farmers must increase their

stock at once if Canada's bacon output is to be larger a year from Britain spends more money for imported hog products than for im-ports of wheat and flour, and Canada has never yet succeeded in fill-ing her peacetime quota of hams and bacon. Before the war the Government was doing its best to encourage porl production, and it was considered likely that the quota would have been filled for the first time in 1940. Now efforts to in-

crease production will be redoubled. Quotas no longer matter.

Wheat and flour can be stored indefinitely and Britain is known to have large stocks in reserve. It is a different story with bacon, Qual-ity deteriorates after two months in storage.

Polish Quota Available. Already one important source of bacon supply has been closed by the war. It is only a year ago that Western producers were urging that Canada increase her bacon

quota by negotiating with Britain for part of the Polish quota. It is now entirely available. Denmark is the biggest source of supply. Before the end of the last war Denmark ceased to export pork products to Britain. Shortage

of feed drastically reduced Danish live stock and Germany increased her demands. The same situation may happen again. Holland and Sweden are also large exporters, but Germany is a competitor for the products of both

In peace Canada has not reached second place in the British bacon market. In wartime it is obvious that Britain will want all the bacon Canada can export.

Bacon is a concentrated method of shipping Canada's surplus grain.

The ideal 200-pound hog may represent 1,000 pounds of wheat. Under

peacetime freight rates, it costs \$5 to move 1,000 pounds of wheat from

hengrin was used a thrombosis was lone average Western acre. Canada's present, and in the heparinized peacetime quota is 280 million series this was almost never obcome within 90 mulion pounds of It was pointed out that while filling it. There is no doubt that In the last war the Dominion cap-

tured the British bacon market for lows, in cases where thrombosis the first time, but lost it because could be expected heparin could lack of quality and irregular shiphe administered to the patient ments. Since then the Dominion the first time, but lost it because of Department of Agriculture and the packers have combined in a successful drive to raise the quality, but we still lack even production of

quantity.

If Canadian farmers can maintain the quality of the last few years and meet war demands for quantity, there is a real opportunity of holding the British market after the war. This would be one of the biggest factors in solving our peacetime wheat problem. It would be a possible way of averting the difficulties which after the last war practically bankrupted Canadian

agriculture.

Hog prices have been low compared with the 1918-20 peak of \$18.66 a hundredweight, but they have been so much more profitable than wheat prices that the Canacars is that all models are longer, dian farmer has been able to feed roomier, built closer to the ground even top-grade wheat and realize and have fewer parts of their bodies
